

This catalogue provides a listing of most of the STC'd modifications that Field Aviation holds that are currently available via a Transport Canada (TC) STC and in many cases FAA and/or EASA STC's. Field Aviation has also developed and obtained numerous TC/FAA/EASA design certifications applicable to single serial number aircraft for specific modifications which are not included in this catalogue. These approved designs offer the groundwork to achieve additional design approvals for subsequent aircraft saving time and money for the new customer. If you find that any of the products listed do not fit your specific requirements or are needed for a different aircraft type, please contact us to see what we can do to meet your needs. Field Aviation would also be interested in developing and certifying other modifications or products to fit your requirements. Our in house Transport Canada Design Approval Organization (DAO) helps to reduce many of the delays found in design certification programs.
